Education

Dundee University / Product Design

I spent 4 years at DJCAD learning about the fundamentals of design and improving my skill set as a designer. It was here that I began to understand who I am as a designer, and I am grateful for the teaching and opportunities I was given there. Graduating with upper second class with honours.

Experience

Freelance / Clothing brand

Project created in spare time making a unisex clothing brand. Working face to face with clients designing custom clothing to the customers criteria in the brands style. The goal was to encourage clients to be more involved with the design work.

Freelance / School of music

During lockdown created graphics and directed social media brand for local music school while they started their business helping to promote them and build a brand for customers to recognise.

Customer service roles

Working in fast moving environments handling stock, cash interactions and supplying good customer service. This experience has been vital as it has given me an understanding of how to interact with customers and their wants and needs.

Skills

CAD softwares

Creating rapid 3D prototypes, custom STL files, concepts highlighting working mechanisms. I have a solid grasp of CAD software and can use them effectively during a design process.

Prototyping

Rapid prototyping using both CAD software and physical materials. The prototypes can be created to help propel the design process and can be high or low fidelity depending on the situation needed.

Research

Analysing and collecting data from different areas and turning it into a useful tool that displays the data in an understandable order. Creating engaging user tests that get the most data out of users and the concept being tested.
